Egyptian national | Available immediately | Open to relocation (UAE / KSA) and remote

PROFESSIONAL SUMMARY

Frontend Developer with 4 years of experience designing and building responsive, user-centric web and mobile applications using React, Next.js, React Native, and TypeScript. Specialist in clean component architecture, performance optimization, accessibility, and turning complex designs into maintainable interfaces. Experienced in building real-time dashboards, secure authentication flows, cross-platform mobile apps, and desktop applications with Electron. Proven ability to own features end-to-end and collaborate closely with UX/UI teams.

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), TypeScript, HTML5, CSS3, Python
Frontend Frameworks:	React, Next.js, React Native
State Management:	Redux, Zustand, React Context
Forms & Validation:	React Hook Form, Formik, Yup
Styling & UI:	Tailwind CSS, CSS3, responsive design, accessibility, Three.js
Data Visualization:	Recharts, real-time charts, interactive dashboards
Data Fetching & APIs:	Axios, REST APIs, async/await, TanStack Query (React Query), token refresh flows
Performance & SEO:	Code-splitting, caching, lazy loading, i18n, SEO optimization
Architecture & Patterns:	System design, OOP, design patterns, component architecture, state management patterns
Desktop & Mobile:	Electron, React Native, PyQt, PySide, cross-platform development
Testing & Tooling:	Jest, unit testing, Vite, Git, GitHub Actions
Build & DevOps:	YAML, PowerShell, CI/CD pipelines, Azure

PROFESSIONAL EXPERIENCE

Software Engineer, Copilot Chat (SRE, Contract) — Microsoft

Remote (US-based team) · May 2025 – Jun 2026

- Owned CI/CD pipeline logic for Copilot Chat frontend using TypeScript and PowerShell, enabling automated rollouts, structured patch deployment, and safe rollback strategies.
- Authored scalable YAML workflows and automation scripts that streamlined frontend releases and reduced manual deployment effort.
- Built unit tests to benchmark frontend performance, surface bottlenecks, and improve release quality across environments.

Full Stack Engineer — Eng Techno, Kafr El-Sheikh

Apr 2025 – Jul 2025

- Developed cross-platform mobile applications using React Native, Zustand, and React Hook Form with responsive layouts and offline support.
- Built and maintained web applications with React, Redux, and Tailwind CSS, integrating REST APIs via Axios for real-time data flow.

- Implemented reusable component architecture and consistent design systems across web and mobile platforms.

Frontend Developer — LeadBull, Cairo

Aug 2024 – Dec 2024

- Built user and admin dashboards in React, Redux, and Tailwind CSS with real-time data visualization using Recharts.
- Implemented secure authentication and token-refresh flows to protect user sessions and prevent unauthorized access.
- Collaborated closely with UX/UI designers to translate Figma designs into pixel-perfect, accessible interfaces.
- Reviewed code and mentored junior developers to maintain frontend code quality and best practices.

Software Engineer — Ronan Medical

Remote (US-based team) · May 2022 – Jan 2024

- Built the desktop application GUI in PyQt and PySide, using Qt signals/slots, custom QWidget components and Qt Designer layouts for a data-intensive clinical workflow.
- Designed the local database schema for critical measurement data, covering data modelling, migrations and query optimisation.
- Applied OOP and design patterns — separation of concerns, single-responsibility modules and dependency injection — across the data-flow layer, which made that layer testable in isolation.
- Built a FastAPI service that received uploaded brain-activity recordings and patient history from the desktop client and persisted them.
- Optimised real-time plotting with PyQtGraph so multi-channel traces stayed responsive during live recording.
- Owned features end-to-end: requirements gathering with clinicians, architecture, implementation and release.

Military Service — Egyptian Armed Forces

Jan 2024 – Aug 2024

- Completed compulsory national service.

KEY PROJECTS

BizFlow — Desktop POS & Inventory Application

Tech: Electron, React 18, TypeScript, Prisma, SQLite, Tailwind CSS, Recharts

Designed and built a complete desktop POS and inventory management application end-to-end, including both the marketing website and the Electron-based desktop app. Implemented real-time product search, role-based access control, and financial analytics dashboards with interactive charts. **Live project:** bizflow.medhatjachour.tech

Digital IA — Cross-Platform Mobile App & Dashboard

Tech: React Native, Next.js, TypeScript, Tailwind CSS, Zustand

Developed a cross-platform mobile application using React Native, delivering secure and responsive banking-style modules with offline support. Built an accompanying executive dashboard in Next.js with advanced data visualization and multilingual support. Focused on mobile UI/UX, encrypted data storage, and secure authentication flows.

1stIQARI — Executive Dashboard Platform

Tech: Next.js, TypeScript, Tailwind CSS, i18n

Built executive dashboards with advanced data visualization, multilingual (i18n) support, interactive maps, and SEO/performance optimization through code-splitting and caching strategies.

Mazboot — 3D E-Commerce Experience

Tech: React, Three.js

Developed a 3D e-commerce platform combining body and product models for an immersive shopping experience using WebGL and Three.js. Graduation project — awarded at university-level competitions.

EDUCATION

B.Sc. Electrical Engineering — Computer Engineering & Control Systems

University of Kafr El-Sheikh | 2017 – 2022
