

Medhat Ashour

Software Engineer — JavaScript, TypeScript & Systems

Kafr El-Sheikh, Egypt | +20 101 568 3986 | medhatashour19@gmail.com

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Egyptian national | Available immediately | Open to relocation (UAE / KSA) and remote

PROFESSIONAL SUMMARY

Software Engineer with 4 years of experience designing, building, and shipping scalable web, mobile, and desktop applications using JavaScript, TypeScript, React, Node.js, Python, PyQt and modern DevOps practices. Proven track record owning CI/CD pipelines and automation for high-scale products (Copilot Chat at Microsoft), delivering end-to-end features from architecture to deployment. Strong background in system design, performance optimization, testing, and cross-platform development across React, React Native, and Electron.

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), TypeScript, HTML5, CSS3, Python
Frontend Frameworks:	React, Next.js, React Native, Redux, Zustand, React Hook Form, Tailwind CSS
Backend & APIs:	Node.js, Express, FastAPI, REST APIs, Prisma, SQLite
Desktop & Cross-Platform:	Electron, React Native, PyQt, PySide
DevOps & CI/CD:	Git, GitHub Actions, YAML, PowerShell, Azure, automated rollouts, rollback strategies
Testing & Quality:	Jest, unit testing, performance benchmarking, code review
Architecture & Patterns:	System design, OOP, design patterns, component architecture, API design, state management, code-splitting, caching
Tools & Libraries:	Vite, Axios, TanStack Query (React Query), Recharts, i18n, Three.js, PyQtGraph

PROFESSIONAL EXPERIENCE

Software Engineer, Copilot Chat (SRE, Contract) — Microsoft

Remote (US-based team) · May 2025 – Jun 2026

- Owned CI/CD pipeline logic for Copilot Chat using TypeScript and PowerShell, enabling automated rollouts, structured patch deployment, and safe rollback strategies across environments.
- Authored scalable YAML workflows and automation scripts that streamlined release processes and reduced manual deployment effort for engineering teams.
- Built unit tests to benchmark performance, surface bottlenecks, and improve release quality, contributing to more reliable production deployments.
- Collaborated with cross-functional teams on architecture and release-readiness reviews for a high-traffic AI chat product.
- Applied system design to release automation — idempotent, failure-tolerant pipelines with explicit rollback boundaries and clear ownership between services.

Full Stack Engineer — Eng Techno, Kafr El-Sheikh

Apr 2025 – Jul 2025

- Developed cross-platform mobile applications using React Native, Zustand, and React Hook Form with offline support and secure data handling.

- Built and maintained web applications with React, Redux, and Tailwind CSS, integrating REST APIs via Axios for real-time data flow.
- Implemented end-to-end features spanning frontend UI, state management, and backend API integration.

Frontend Developer — LeadBull, Cairo

Aug 2024 – Dec 2024

- Built user and admin dashboards in React, Redux, and Tailwind CSS with real-time data visualization and role-based access.
- Implemented secure authentication and token-refresh flows to protect user sessions and prevent unauthorized access.
- Collaborated closely with UX/UI designers, reviewed code, and mentored junior developers to maintain code quality standards.

Software Engineer — Ronan Medical

Remote (US-based team) · May 2022 – Jan 2024

- Built the desktop application GUI in PyQt and PySide, using Qt signals/slots, custom QWidget components and Qt Designer layouts for a data-intensive clinical workflow.
- Designed the local database schema for critical measurement data, covering data modelling, migrations and query optimisation.
- Applied OOP and design patterns — separation of concerns, single-responsibility modules and dependency injection — across the data-flow layer, which made that layer testable in isolation.
- Built a FastAPI service that received uploaded brain-activity recordings and patient history from the desktop client and persisted them.
- Optimised real-time plotting with PyQtGraph so multi-channel traces stayed responsive during live recording.
- Owned features end-to-end: requirements gathering with clinicians, architecture, implementation and release.

Military Service — Egyptian Armed Forces

Jan 2024 – Aug 2024

- Completed compulsory national service.

KEY PROJECTS

BizFlow — Business Management Platform (Desktop + Web)

Tech: Electron, React 18, TypeScript, Prisma, SQLite, Tailwind CSS, Recharts

Designed and built a complete, plugin-based multi-business management platform end-to-end, including both the marketing website and the Electron-based desktop app. Implemented real-time product search, role-based access control, and financial analytics dashboards with interactive charts. [Live project: bizflow.medhatjachour.tech](https://bizflow.medhatjachour.tech)

Digital IA — Dashboard & Mobile App

Tech: React Native, Next.js, TypeScript, Tailwind CSS, Zustand

Developed a cross-platform mobile application using React Native, delivering secure and responsive banking-style modules with offline support. Built an accompanying executive dashboard in Next.js with advanced data visualization and multilingual support. Focused on mobile security features, encrypted data storage, and secure authentication flows.

1stIQARI — Real Estate website & Executive Dashboard Platform

Tech: Next.js, TypeScript, Tailwind CSS, i18n

Built executive dashboards with advanced data visualization, multilingual (i18n) support, interactive maps, and SEO/performance optimization through code-splitting and caching strategies.

Mazboot — 3D E-Commerce Platform

Tech: React, Three.js

Developed a 3D e-commerce platform combining body and product models for an immersive shopping experience.
Graduation project — awarded at university-level competitions.

EDUCATION

B.Sc. Electrical Engineering — Computer Engineering & Control Systems

University of Kafr El-Sheikh | 2017 – 2022
